

A Smart Way to Better Bed Bug Management

Your business partner for the treatment of bed bugs

Do you have customers who have problems with bed bugs? Or do you want to prevent bed bugs and avoid problems in the future? Then Nattaro Labs is the ideal business partner for you. We are bed bug experts, and we have a unique patented Swedish invention that prevents bed bugs.

Proven effect

Nattaro Safe is a bed bug tape with proven effect, that is easy to fit to the underside of a bed, for example. The active substance in the tape, natural diatomaceous earth, is non-toxic and non-hazardous to humans and pets. The construction is attractive to bed bugs, and carries a perfectly balanced dose that creates a minimum of dust when fitting.

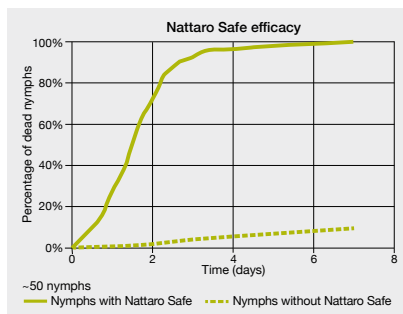

Nattaro Safe®

- Immediate effect, lasts for at least 12 months
- Kills bed bugs in all stages
- Bed bugs do not build resistance

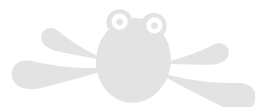

A simple, effective solution to a serious problem

Research shows that nine out of ten bed bug infestations start in our beds, and that the bugs' growth rate is exponential. Nattaro Safe breaks the bed bug's lifecycle to ensure that their arrival never develops into a major problem. Thanks to its design, the product is simple to fit where it is needed, whether under the bed, on or behind skirting, head-boards and so on. Use Nattaro Safe preventively and after treatment to prevent recurring problems.

By fitting Nattaro Safe to beds, bed bug population development is cut off, thus controlling a bed bug infestation before it reaches exponential growth.

- Easy to fit under and around the bed
- An effective preventive shield in at-risk environments
- The perfect complement to conventional pest control methods

Bed bug specialists

Every year, the bed bug problem is increasing dramatically throughout the western world. Here at Nattaro Labs, we specialise in bed bugs and develop products to effectively prevent and combat the problem.

Globally unique research

Our business is based on globally unique research at Lund University, southern Sweden. In our own research laboratory, we are continuously working to evolve our offering. The Nattaro Safe product, a patented invention, is made in Sweden and approved for use as a biocide.

Expert help

We work with pest control companies, detection dog handlers, hotel chains, property and insurance companies, migration authorities and student housing companies to prevent and combat bed bugs. In addition to consultancy and product development, we also offer training and other knowledge-enhancing activities.
