

NATTARO SCOUT™ – User Guide

For detection of low level infestations

Installation of Nattaro Scout

1. Open and remove sticker, place the lure inside trap with hole facing upwards
2. Slide into holder, place traps in the darkest corners of a sleeping place, on the floor between mattresses

Inspection of Nattaro Scout

Place trap on firm surface with good light, remove the cone, inspect inside and outside for bed bugs

Placement between mattresses and by the legs of the bed

Protective sticker

9 out of 10 bed bug infestations originates in the bed, begin the search here. Make a quick visual inspection of the bed and linen, look for shreds of light brown exuvia and pitch black spots (faeces) along mattress seams and bed frame.

- Position 2 or more traps per suspected object, e.g. between mattresses or by the legs in the darkest corners of the bed
- Place the monitor horizontally with the hole of the lure facing upwards
- Inspect the traps on a regular basis and **replace lure every 4 weeks**
- The lure mimics the natural scent of a bed bug aggregation, called a harbourage
- Call your pest control company for a professional treatment of an infestation
