

Reference, Nattaro Safe – RMH

Ronald McDonald Villa in Lund

" We believe that a safe environment where the whole family can be together can speed up a child's recovery. Therefore, there is Ronald McDonald's Villa. Here seriously ill children and their families are living together in a home-like environment. Close to the specialist hospital during a difficult time. In the Villa, the families live with others in a similar situation. " Translation from the RMH website in Swedish, if you want to support the good work at RMH <https://www.ronaldmcdonaldhus.se/ge-en-gva/>

Since February 2018 the beds at RMH have a preventive protection against bed bugs. A total of 84 permanent beds and 20 removable cribs and extra beds. In total, 104 beds at RMH in Lund have Nattaro Safe installed on the underside. The staff have had a training session on the bed bug situation and associated challenges, including an introduction to the installation of the bed bug tape.

" I feel confident that we have done what we can to prevent and protect our house from bedbugs. "In our industry this is an increasing problem and because we have not yet been affected, I want to make sure that we will not be either!

"A bed bug treatment, following an infestation, is also far more costly than preventive work!"?
