

The **only** bedbug  
protection on the  
market designed  
for Nordic beds

# BEDBUG P R O T E C T O R

Unique bed bug encasements, to be used both as protection of your beds and as part of a treatment in the event of a bed bug infestation.

For box mattresses

For turnable mattresses

For top mattresses

## Unique protection for your bed/mattress

Zipper solution that forms a seal

Protective, bedbug-proof fabric. Both breathable and washable

Tight lead-throughs for legs

## Tested product safety

The product has been thoroughly tested by professional test companies to ensure its functionality – with no reservations.

- The total capacity of the product to withstand both external attacks and internal attacks (sealing in an infested product) has been tested and approved.
- Everything has been tested: fabric, seams, zipper, leg lead-throughs (box mattress), sealing label

### TESTED AND APPROVED

The total product, both with and without leg attachment, has been thoroughly tested by Nattaro Labs AB<sup>2</sup> without bed bug entrance or feed through.

<sup>1</sup> Snell Scientifics LLC Georgia, USA - One of few laboratories who can test with live bedbugs.

<sup>2</sup> Nattaro Labs, Lund, Sverige - Leading experts on bedbugs with the Nordic region's premier laboratory with its own bedbugs and extensive research and development work.

## The advance of the bed bug

A growing problem all over the world

- Bedbugs constitute a growing problem all over the world: at hotels, in student housing and private homes
- More than two-thirds of the pest control technicians asked reports they considered the bedbug to be the toughest pest to deal with
- One American in five either has personal experience of bedbugs or knows someone who has been affected by them

How does the infestation spread?

- Spreads through our own items (travel bags, furniture, etc.)
- Accompanies us on public transport (trains, buses, planes, etc.)

Why the increase?

- Unfamiliarity and lack of knowledge among everyone involved
- Widespread resistance to all insecticides make infections tough to combat
- Lack of preventative measures in high-risk environments

## Bed bug ecology

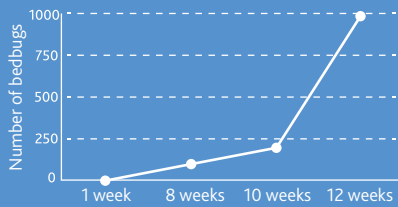

Bedbugs live exclusively off blood – humans are their hosts

Where are bedbugs to be found?

- In cracks and crevices for the majority of the day close to our beds (makes them hard to spot in time)
- Bedbugs also want to live as close to their food as possible. On inspection, bedbugs are found in the bed nine times out of ten
- The longer an infestation is allowed to develop, the greater the risk of it spreading throughout the room/facility

Growth rate of bed bug infestation starting with one mated female. Within 10 to 12 weeks the infestation becomes epidemic.

The bedbug has a unique ability to hibernate for more than a year if there is no food available. This means it is almost impossible to starve out a bed bug infestation.

## Protective properties of the product

- Unique bedbug protection that can be used both as prevention and control
- Available for box mattresses, turnable mattresses and top mattresses

Can protect/salvage an infested bed/mattress

Can never fully prevent and protect against an infestation at a facility

## Professional use and warranty

BedBug Protector is initially intended for hotels and other public residences that accommodate large numbers of people

For the product to function as intended, and for the warranties to apply, professional handling is required along with a good understanding of bedbug behaviour and biology.

Hilding Anders takes responsibility for the quality and functionality of the product.

Whoever uses/fits the product is responsible for ensuring it functions as intended.

Secure protection is the result of correct handling of a marketable product, combined with good understanding of bedbug behaviour and ecology.

### Product warranty

The warranty applies exclusively to defects in the design, material and manufacture of the product. The warranty is limited to 25 washes or a maximum of three years – whichever comes first.

### Limitations on the warranty

- The warranty only applies when the product is fitted according to the instructions provided by Hilding Anders.
- Damage attributable to incorrect use, carelessness, changes made to the product by the purchaser, or failure to follow the instructions (installation, handling and care) is not covered by the warranty.
- The warranty does not cover direct or indirect damage of any kind. Hilding Anders and their resellers accept no liability for bedbug infestation or other damage to products, material or areas other than the one(s) the product is intended to protect (top mattress, turnable mattress or box mattress), nor will they accept liability for any other products, materials or areas.

## Problem resolution

On infestation

- It is not possible to deal with an infestation on your own – always use a professional pest control company
- A combination of methods – freezing, heat-treatments, Diatomaceous Earth, insecticide, mattress encasements, active detection traps and inspections – is required to achieve desired result.

### Prevention

- Focus on high-risk environments with good methodology preventive measures and non-toxic methods
- Use of long-term proactive measures involving tested products/methods with verified efficacy

# BEDBUG PROTECTOR

## A complete range

The product is available in the most common standard dimensions and a variety of heights

The only bedbug protection on the market that is designed for Nordic box mattresses where the legs are fitted directly to the frame

### For box mattresses

Suits box mattresses in a height range of 22-25 cm
