

NATTARO SAFE®

A smart way to better bed bug management

nattarolabs.com

YOUR BUSINESS PARTNER FOR THE TREATMENT OF BED BUGS

Do you have customers who have problems with bed bugs? Or do you want to prevent bed bugs and avoid problems in the future? Then Nattaro Labs is the ideal business partner for you. We are bed bug experts, and we have a unique patented Swedish invention that prevents bed bugs.

PROVEN EFFECT

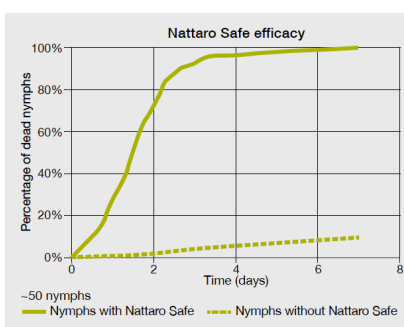

Nattaro Safe® is a bed bug tape with proven effect, that is easy to fit to the underside of a bed, for example. The active substance in the tape, natural diatomaceous earth, is non-toxic and non-hazardous to humans and pets. The construction is attractive to bed bugs, and carries a perfectly balanced dose that creates a minimum of dust when fitting.

- Immediate effect, lasts for at least 12 months
- Kills bed bugs in all stages
- Bed bugs do not build resistance

A SIMPLE, EFFECTIVE SOLUTION TO A SERIOUS PROBLEM

Research shows that nine out of ten bed bug infestations start in our beds, and that the bugs' growth rate is exponential. Nattaro Safe breaks the bed bug's lifecycle to ensure that their arrival never develops into a major problem. Thanks to its design, the product is simple to fit where it is needed, whether under the bed, on or behind skirting, headboards and so on. Use Nattaro Safe preventively and after treatment to prevent recurring problems.

- **Easy to fit under and around the bed**
- **An effective preventive shield in at-risk environments**
- **The perfect complement to conventional pest control**

By fitting Nattaro Safe to beds, bed bug population development is cut off, thus controlling a bed bug infestation before it reaches exponential growth.

Bed bug specialists

The bed bug problem continues to grow throughout the world. Here at Nattaro Labs, we specialise in bed bugs and in developing products to effectively prevent and combat this challenge.

Globally unique research

Our business is based on unique research in Chemical Ecology initiated at Lund University, southern Sweden. In our own research laboratory, we are continuously working to learn more and to develop our offering. Nattaro Scout, the monitoring system with bed bug pheromones, is a unique invention made in Sweden.

Expert help

Nattaro Labs work with pest control professionals all over the world, leading researchers, the accommodation industry and others to prevent, detect and control bed bug infestations. In addition to our products we also offer consultancy, education and training programs as well as other knowledge enhancing activities.
